Marketing Platform

SMTnet Marketing Platform – What is it?

The taxonomy of business models defines two opposing camps: pipes and platforms. Your website is a "Pipe" in your companies' overall plumbing.

- A 'pipe' refers to physical infrastructure and assets that help create products and services, metaphorically pushing out these goods for consumers.
- Platforms, meanwhile, are relatively intangible networks, which derive their value by matching or connecting both buyers and sellers within a multi-sided marketplace.

Marketing platforms create a 'network effect'. This is a phenomena whereby an increasing number of participants increases the value of the goods and services.

How Can the SMTnet Marketing Platform Benefit My Company?

The unique ability we offer is to put your company in front of 600,000+ engineers who are already showing interest in what you sell. The SMTnet website has over 2 million content pages related to electronics manufacturing assembly.

This aggregation of industry specific content includes:

- Forum questions and answers (200,000+)
- Company Listings (15,000+)
- Product & Service Listings (900,000+)
- News, Job Listings, Events, Training (60,000+)

These 2 million + pages target the right people for a wide variety of industry specific topics which can be connected to your company. You will not just be 'advertising' - you will be 'marketing' - to engineers who have already shown interest in your product or service category.

The SMTnet marketing platform identifies and then categorizes 2,000,000+ pages of industry specific content and the people looking at that content. Then the platform uses our Propitiatory Machine Learning and Al Algorithms to promote your very targeted & relevant message to the right people at the right moment.

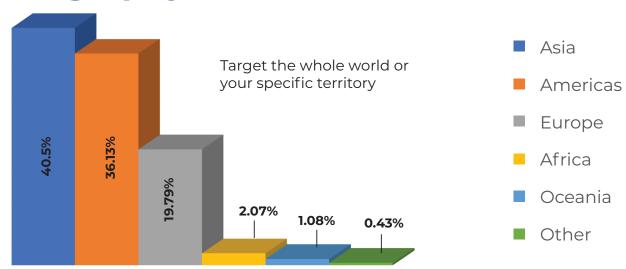

2019 SMTnet Statistics
